1. INTRODUCTION

1.1. Project Overview

In this project, two datasets name fruit dataset and vegetable dataset are collected. The collected datasets are trained and tested with deep learning neural network named Convolutional Neural Networks (CNN). First, the fruit dataset is trained and then tested with CNN. It has 6 classes and all the classes are trained and tested. Second, the vegetable dataset is trained and tested. The software used for training and testing of datasets is Python. All the Python codes are first written in Jupyter notebook supplied along with Anaconda Python and then the codes are tested in IBM cloud. Finally, a web-based framework is designed with help Flask a Python library. There are 2 html files are created in templates folder along with their associated files in static folder. The Python program 'app.py' used to interface with these two webpages is written in Spyder- Anaconda python and tested.

1.2. Purpose

This project is used to test the fruits and vegetables samples and identify the different diseases. Also, this project recommends fertilizers for predicted diseases.

2. LITERATURE SURVEY

2.1. Existing problem

Indumathi proposed a method for leaf disease detection and suggest fertilizers to cure leaf diseases. But the method involves less number of train and test sets which results in poor accuracy. Pandi selvi proposed a simple prediction method for soil-based fertilizer recommendation system for predicted crop diseases. This method gives less accuracy and prediction. Shiva reddy proposed an IoT based system for leaf disease detection and fertilizer recommendation which is based on Machine Learning techniques yields less 80 percentage accuracies.

2.2. References

- Leaf Disease Detection and Fertilizer Suggestion
- Plant Disease Detection and Classification using CNN Model with Optimized Activation Function
- Crop leaf disease detection using machine learning algorithm

2.3. Problem Statement Definition

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Farmers	Cultivate healthy crops	It is not possible	It is affected by disease and insufficient fertilizer	Frustrated and Economically weak
PS-2	Local people	Buy healthy and organic vegetables at low cost	The price of food products are high and the quality is low	Crops are affected by disease	Frustrated

3. IDEATION & PROPOSED SOLUTION

3.1. Empathy Map Canvas

3.2. Ideation & Brainstorming

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

🕒 10 minutes to prepare
🕒 1 hour to collaborate
👥 2-8 people recommended

➔ Before you collaborate
A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

🕒 10 minutes

A Team gathering
Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

B Set the goal
Think about the problem you'll be focusing on solving in the brainstorming session.

C Learn how to use the facilitation tools
Use the Facilitation Superpowers to run a happy and productive session.

[Open article](#) ➔

1 Define your problem statement
What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

🕒 5 minutes

PROBLEM

How might we [your problem statement]?

Key rules of brainstorming

To run a smooth and productive session

- Stay in topic.
- Defer judgment.
- Go for volume.
- Encourage wild ideas.
- Listen to others.
- If possible, be visual.

2 Brainstorm
Write down any ideas that come to mind that address your problem statement.

🕒 10 minutes

TIP
You can select a sticky note and hit the arrow button for quickly going to next drawing!

Gayathri

- Refuse harmful fertilizer
- Use fertilizer in correct way
- Image processing easily identify pests and disease

Flora

- Avoid unwanted pesticide
- Suggest organic fertilizer
- Prevent land from chemical fertilizers

Pradeeba

- Formers may avoid soil pollution
- Usage limit of fertilizer to be mentioned

Vijaya rama lakshmi

- Also suggest organic farming methods to farmers
- Suggest farming techniques to farmers
- Environment friendly

yamuna

- Suggest Good fertilizer
- User friendly

3 Group ideas
Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

🕒 20 minutes

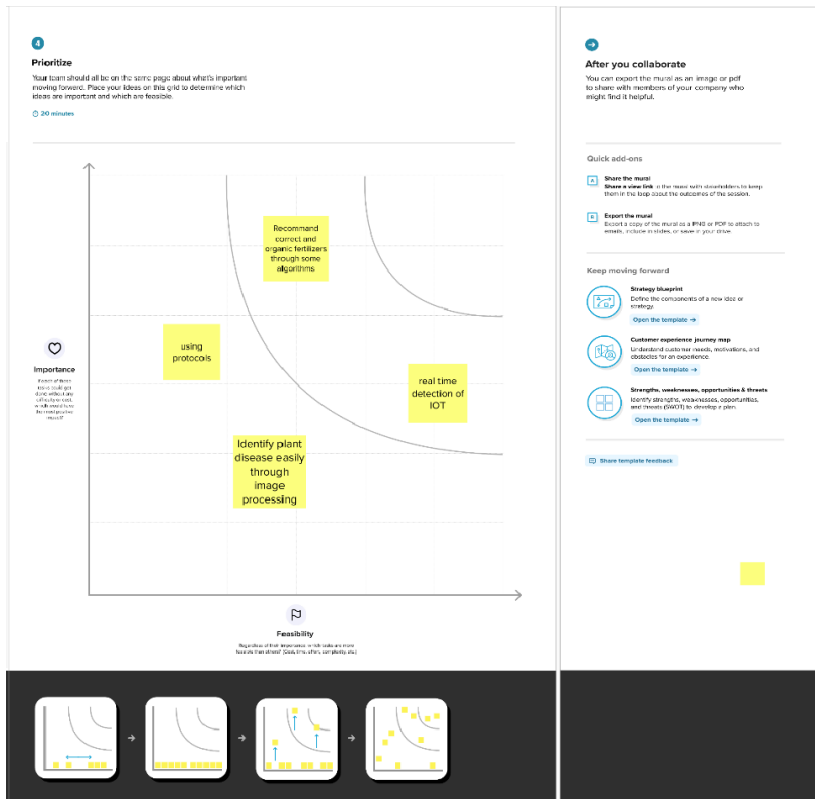

Easily identify plant disease

Recommend best farming methods

Provide correct and organic fertilizer

TIP
Add a considerable tag to the notes to make it easier to find, format, organize and change for required cases as needed within your team.

3.3. Proposed Solution

In this project work, a deep learning based neural network is used to train the collected datasets and test the same. The deep learning based neural network is CNN which gives more than 90% classification accuracies. By increasing the more number of dense layers and by modifying hyperparameters such as number of epochs, batch size, the accuracy rate can be increased to 95% to 98%.

3.4. Problem Solution Fit

Project Title: Fertilizers Recommendation System for Disease Prediction.
Team ID: PNT2022TMID51209

Project Design Phase-I - Solution Fit Template

Define CS fit into CC	1. CUSTOMER SEGMENT(S) Farmer are the first customer for this application farmers can easily use this benefits and get uses of fertilizers crop. CS	6. CUSTOMER CONSTRAINTS Availability of good networks. Capturing the image in a required to Get a accurate prediction of disease in the plant.	5. AVAILABLE SOLUTIONS People can can identify the disease in plants through the Change of leaf quality. CS	Evolve AS differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS The applications focuses it can helping for the farmer Who needs a better recommendation of fertilizer on the selected volume.	9. PROBLEM ROOT CAUSE RC Various disease on the plants can lead to reduce the quality and quantity of the crops production.	7. BEHAVIOUR BE In offline people can directly see the quality of the leaf. They dont need an extra knowledge on the disease prediction.	
Focus on JRT two into BE understand RC	3. TRIGGERS TR Seeing their crops are being infected by disease and facing huge loss in quality and quantity.	10. YOUR SOLUTION SL Using sensors is the one of the solution for the disease prediction in plants. In our image processing application it can identify the disease and rectify the good fertilizer for the disease leaf.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE Basic knowledge of plant and fertilizer was helpful. 8.2 OFFLINE People try to identify the disease by the quality of leaf.	Identify strong TR
Identify strong TR	4. EMOTIONS: BEFORE / AFTER EM BEFORE losing self confidence and distress. AFTER: gaining self confidence and relief.		Identify strong TR	

4. REQUIREMENT ANALYSIS

4.1. Functional requirement

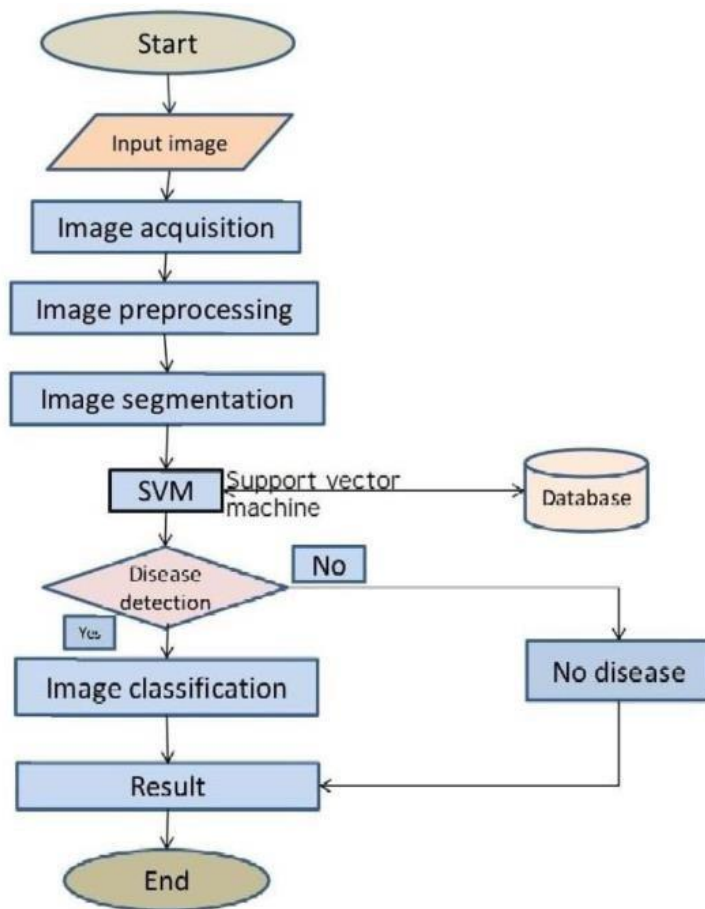

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIn
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Capturing image	Capture the image of the leaf and check the parameter of the captured image.
FR-4	Image processing	Upload the image for the prediction of the disease in the leaf.
Fr-5	Leaf identification	Identify the leaf and predict the disease in leaf.
Fr-6	Image description	Suggesting the best fertilizer for the disease.

4.2. Non -Functional Requirements

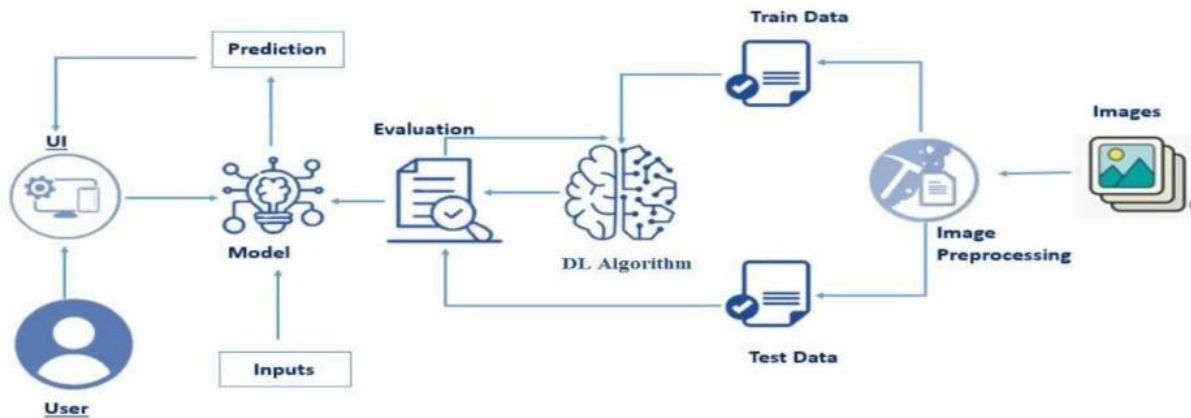

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Datasets of all the leaf is used to detecting the disease that present in the leaf.
NFR-2	Security	The information belongs to the user and leaf are secured highly.
NFR-3	Reliability	The leaf quality is important for the predicting the disease in leaf.
NFR-4	Performance	The performance is based on the quality of the leaf used for disease prediction
NFR-5	Availability	It is available for all user to predict the disease in the plant.
NFR-6	Scalability	Increasing the prediction of the disease in the leaf.

5. Project Design

5.1. Data Flow Diagrams

5.2. Solution & Technical Architecture

5.3. User Stories

Functional Requirement (Epic)	User Story Number	User Story / Task
Data collection	USN-1	Collect and create the data set related to the objective
Image processing	USN-2	Process the images
Model Building for fruit disease prediction	USN-3	Import libraries
Model Building for fruit disease prediction	USN-4	Initializing the model
Model Building for fruit disease prediction	USN-5	Adding layers
Model Building for fruit disease prediction	USN-6	Train and save the model for fruits
Model Building for vegetable disease prediction	USN-7	Train and save the model for vegetable
Test both model	USN-8	Testing the built model
Application building	USN-9	Build python code
Application building	USN-10	Build HTML code
Application building	USN-11	Run the code

Train the model on IBM	USN-12	Register cloud account
Train the model on IBM	USN-13	Train the model on IBM

6. Project Planning & Scheduling

6.1. Sprint Planning & Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Data collection	USN-1	Collect and create the data set related to the objective	10	High	RISHIKA.R RAJALA TEJASWI RESHMA.P POONKUZHALI.M.C
Sprint-1	Image processing	USN-2	Process the images	10	High	RISHIKA.R RAJALA TEJASWI RESHMA.P POONKUZHALI.M.C
Sprint-2	Model Building for fruit disease prediction	USN-3	Import libraries	2	Low	RISHIKA.R RAJALA TEJASWI RESHMA.P POONKUZHALI.M.C
Sprint-2	Model Building for fruit disease prediction	USN-4	Initializing the model	2	Low	RISHIKA.R RAJALA TEJASWI RESHMA.P POONKUZHALI.M.C
Sprint-2	Model Building for fruit disease prediction	USN-5	Adding layers	2	Low	RISHIKA.R RAJALA TEJASWI RESHMA.P POONKUZHALI.M.C
Sprint-2	Model Building for fruit disease prediction	USN-6	Train and save the model for fruits	7	High	RISHIKA.R RAJALA TEJASWI RESHMA.P POONKUZHALI.M.C
Sprint-2	Model Building for vegetable disease prediction	USN-7	Train and save the model for vegetable	7	High	RISHIKA.R RAJALA TEJASWI RESHMA.P POONKUZHALI.M.C

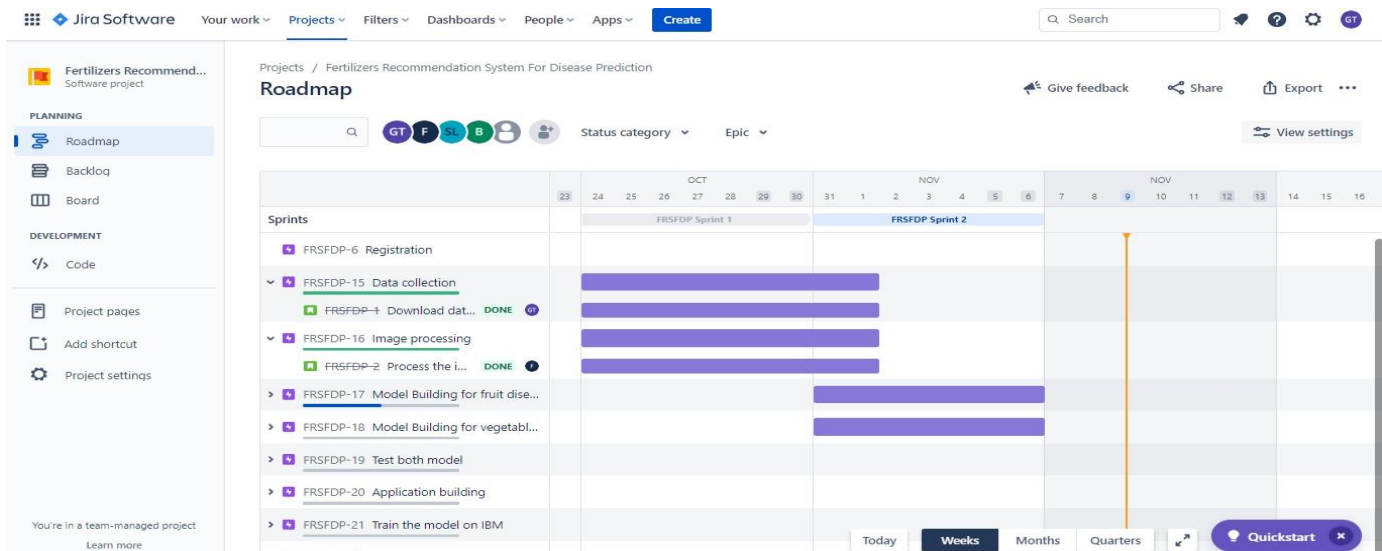

Sprint-3	Test both model	USN-8	Testing the built model	5	Medium	RISHIKA.R RAJALA TEJASWI RESHMA.P POONKUZHALI.M.C
Sprint-4	Application building	USN-9	Build python code	5	Medium	RISHIKA.R RAJALA TEJASWI RESHMA.P POONKUZHALI.M.C
Sprint-4	Application building	USN-10	Build HTML code	5	Medium	RISHIKA.R RAJALA TEJASWI RESHMA.P POONKUZHALI.M.C
Sprint-4	Application building	USN-11	Run the code	10	High	RISHIKA.R RAJALA TEJASWI RESHMA.P POONKUZHALI.M.C
Sprint-3	Train the model on IBM	USN-12	Register cloud account	5	Medium	RISHIKA.R RAJALA TEJASWI RESHMA.P POONKUZHALI.M.C
Sprint-3	Train the model on IBM	USN-13	Train the model on IBM	10	High	RISHIKA.R RAJALA TEJASWI RESHMA.P POONKUZHALI.M.C

6.2. Sprint Delivery Schedule

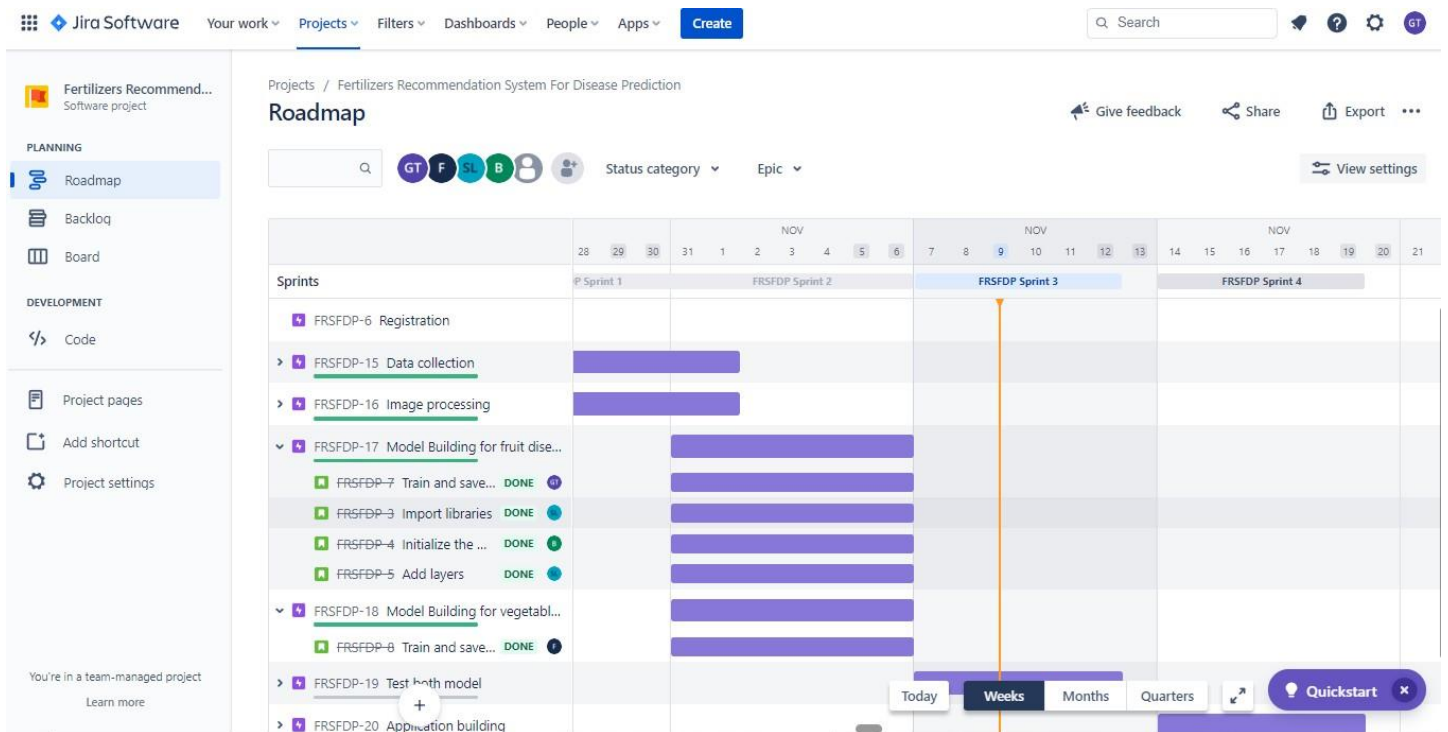

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

10. ADVANTAGES & DISADVANTAGES

List of advantages

- The proposed model here produces very high accuracy of classification.
- Very large datasets can also be trained and tested.

- Images of very high can be resized within the proposed itself.

List of disadvantages

- For training and testing, the proposed model requires very high computational time.
- The neural network architecture used in this project work has high complexity.

11. CONCLUSION

The model proposed here involves image classification of fruit datasets and vegetable datasets. The following points are observed during model testing and training:

- The accuracy of classification increased by increasing the number of epochs.
- For different batch sizes, different classification accuracies are obtained.
- The accuracies are increased by increasing more convolution layers.
- The accuracy of classification also increased by varying dense layers.
- Different accuracies are obtained by varying the size of kernel used in the convolution layer output.
- Accuracies are different while varying the size of the train and test datasets.

12. FUTURE SCOPE

The proposed model in this project work can be extended to image recognition. The entire model can be converted to application software using python to exe software. The real time image classification, image recognition and video processing are possible with help OpenCV python library. This project work can be extended for security applications such as figure print recognition, iris recognition and face recognition.
